

COMPLETED CONTRACT

Site and Location: The Glen Regeneration Project, Cork.

The Glen Regeneration Project for CLG involved the complete renewal and replacement of existing underground services to 56 existing residential housing units at The Glen Housing Development in Cork City.

The existing units had to remain occupied for the duration of the works. The proposal also had to include pedestrian access to existing units, emergency services entries, access for maintenance, delivery and refuse collection, and vehicular and disabled access to the units at all times. CLG constructed temporary parking for the residents for the duration of the project.

In addition to the renewal and replacement of underground services, works included demolition and construction of new boundary treatments including retaining walls which required underpinning, replacement of surface finishes to the driveways adjacent roads and footpaths, and urban landscaping.
