

## COMPLETED CONTRACT

**Site and Location:** Gortahile Wind Farm, Co. Laois.

CLG Developments Ltd were employed by ABO Wind Ireland for the development of the Gortahile Wind Farm. This project involved the installation of four ESB ducts through roads, verges and forestry land over a distance of 11kms.

The ducts were installed to carry three 38kv power cables and one fibre optic communications, linking the wind farm site substation to an ESB substation in Carlow Town.

Along the route various existing services and structures had to be located and protected including a Bord Gais 19bar transmission line, live water mains, telecoms, bridges & culverts. Much of these works necessitated the excavation of rock.

This project is in line with CLG Developments' commitment to the Green Agenda.
