

## COMPLETED CONTRACT

**Site and Location:** Bord Gáis Craughwell to Loughrea, Co. Galway.

This project entailed bringing a new natural gas supply to Loughrea in the west of Ireland. In conjunction with BGN- gaswest, CLG constructed 10km of 180PE 4 Bar feedermain along the N6, and 10km of 4Bar-75mB distribution mains in Loughrea town.

CLG were responsible for all of the enabling works, archaeological monitoring, laying, testing, backfilling, and commissioning of the gas mains and services together with all associated civil engineering works.

The works at times involved considerable out of hours attendance. Off peak working arrangements were agreed through consultation with Galway County Council and local business interests, in order to minimise the impact of the works on the general population.
